Sealing the Crystal Screens

For ALL Screen Kits (Except the Wizards)

1) Fold over the tape-end to produce a flap (If not done already).
2) stretch tape across the DWB, with flap extending over the edge at the A-H12 end.
3) Gently lower tape onto the tray/DWB.
4) Cut tape at A-H1 edge of the DWB.
5) Fold edge of tape-roll to form a flap (as in Step1)
6) Gently push the tape, from the center into each edge, to smooth it out. Remove any bubbles or creases.
7) Use the rubber SPATULA to fix the tape to the DWB. Always work out from the center toward the edges, in all directions.
8) Sight along top of DWB. Look for any bubbles or creases. Fix problems or reapply tape as necessary.

For the EMERALD Wizard kits.

These are sealed with a reusable silicone gasket sheet. They CANNOT be sealed with tape!

1) Place silicone gasket on the tray. Please note the orientation of A1 - Do Not contaminate the solutions by rotating the gasket. The tabbed end of the gasket goes along A-H12.
2) Press FIRMLY with your thumbs, working from one end to the other, and again from the center outwards.
3) REPEAT until the gasket is pushed in all the way for every well.
4) Check by sighting along top of the gasket. Look for places where the gasket bulges. Fix any bulge.

RECORD TRAY USAGE ON SIDE OF DWB
